

Per-gene ploidy composition across strains

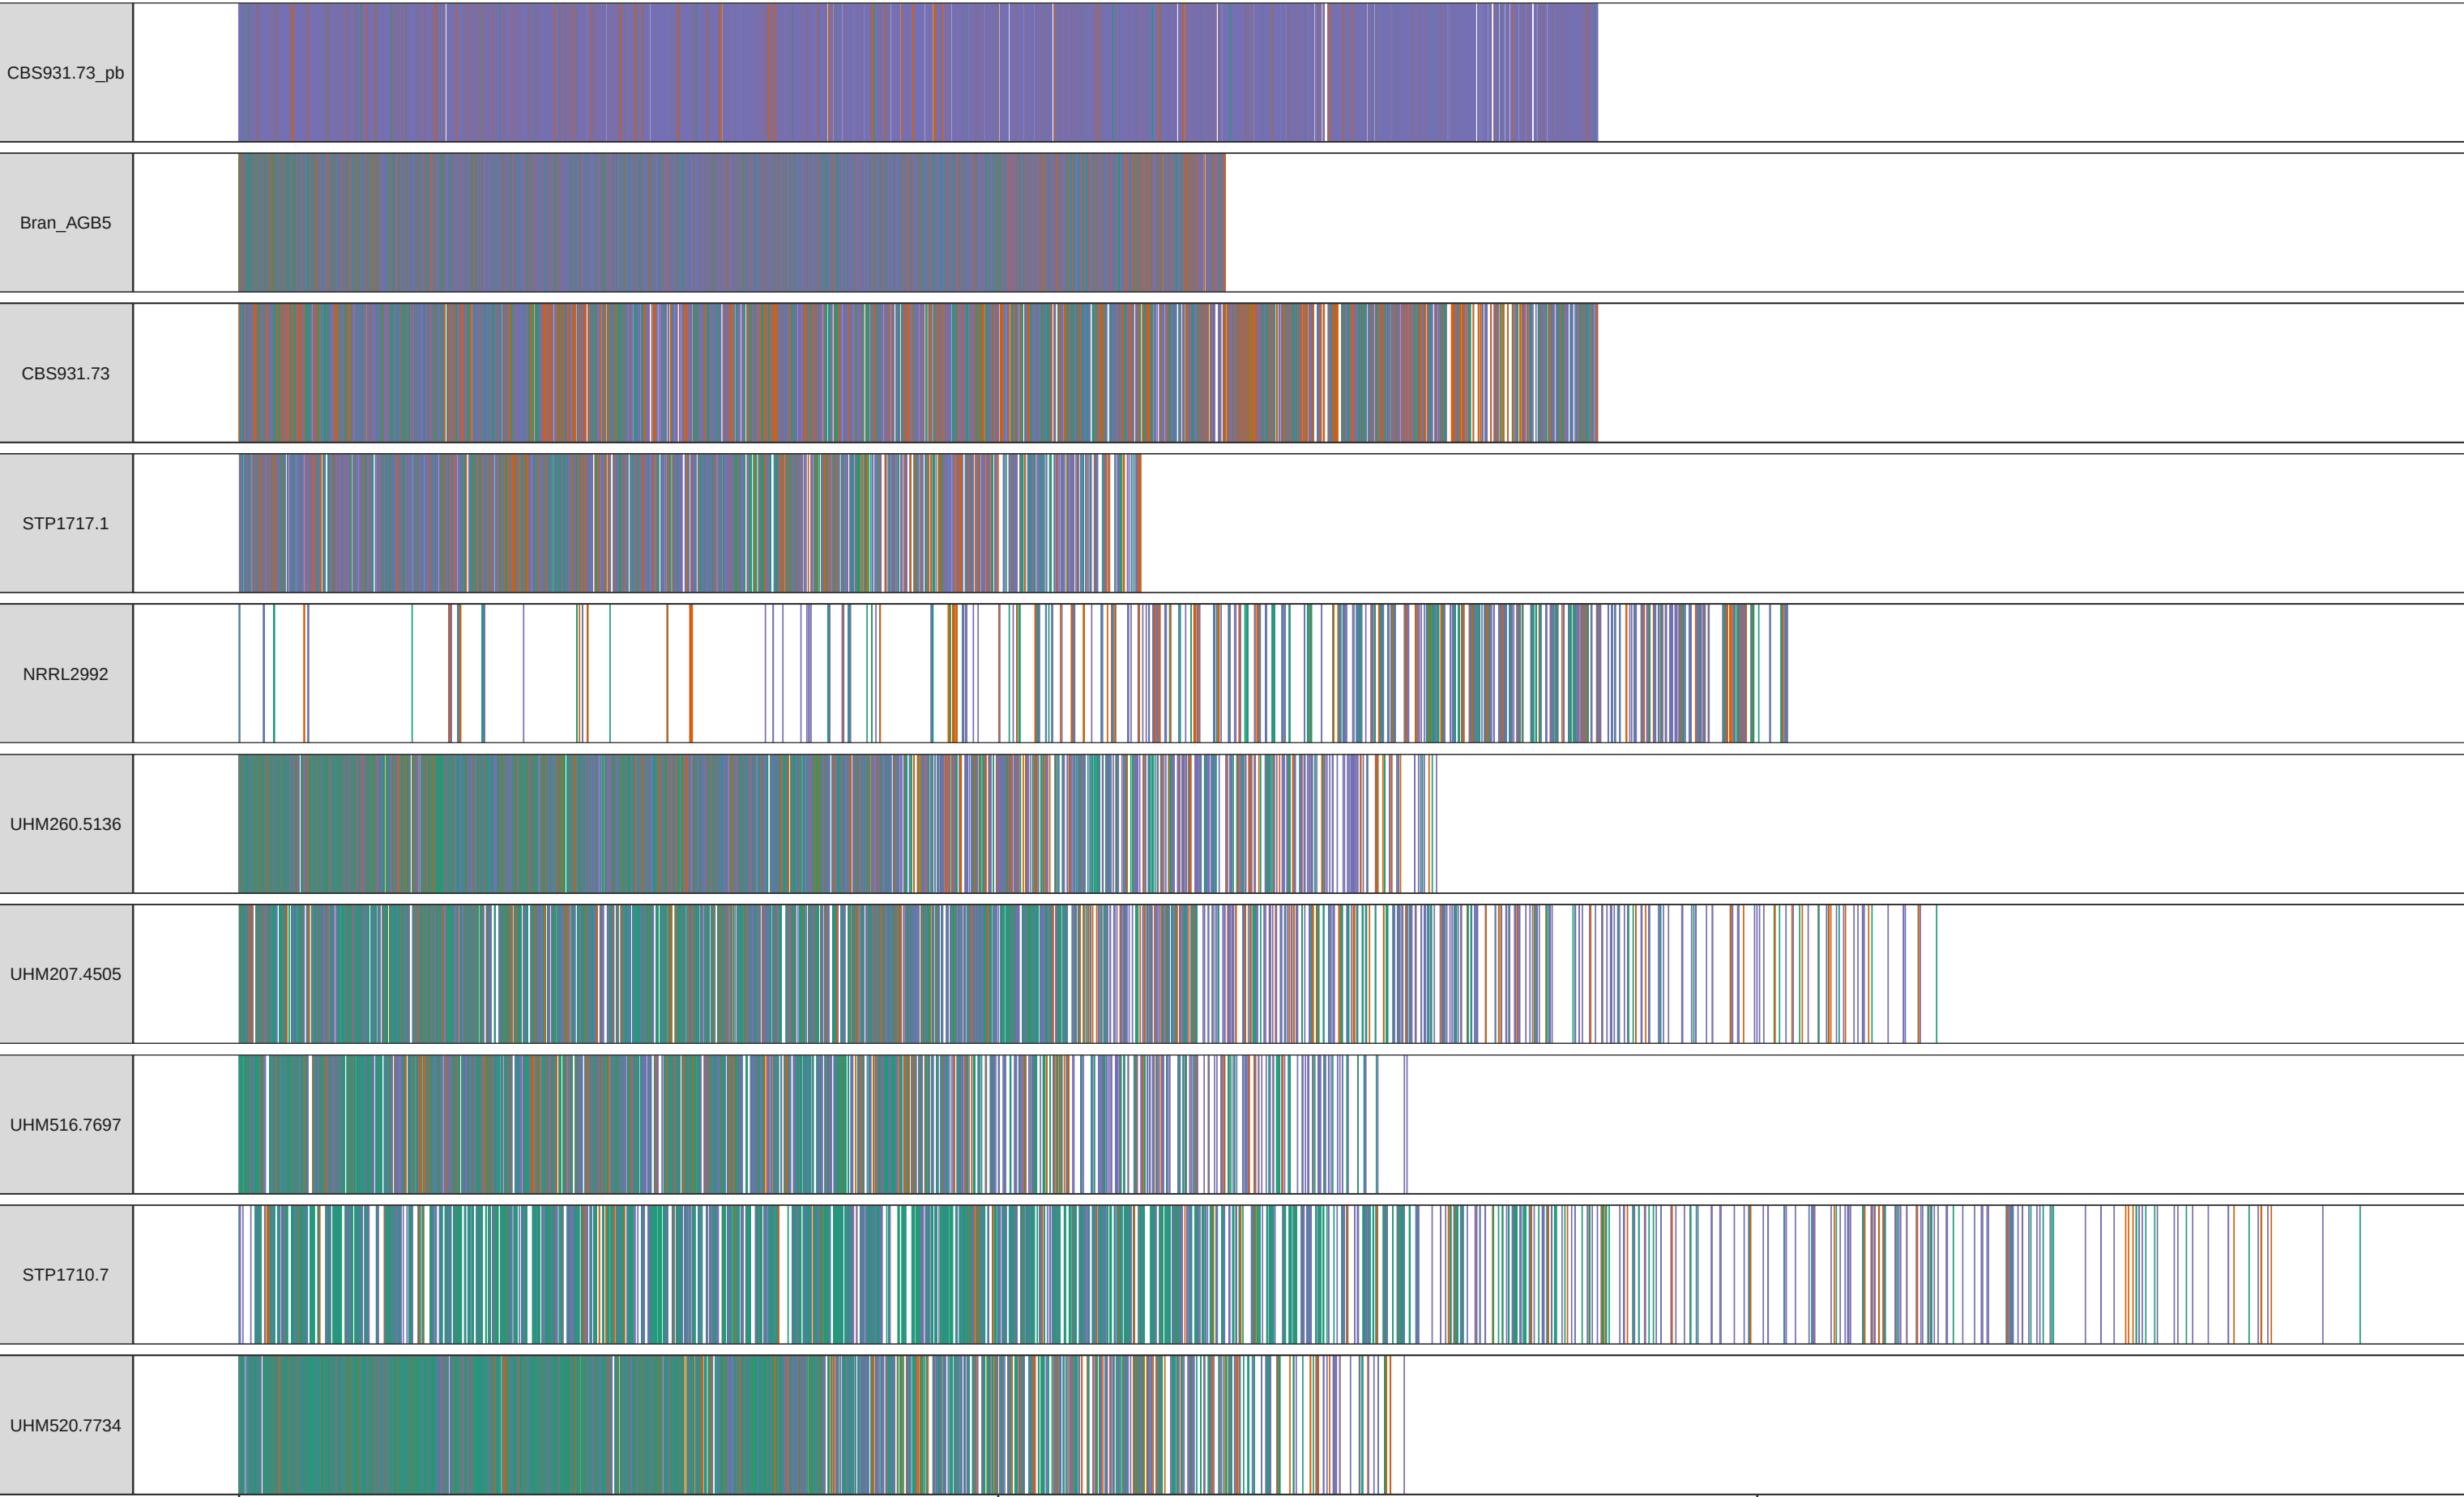

winner = smallest delta-log-likelihood (d_dip/d_tri/d_tet); missing genes excluded

ploidy call 2n (diploid) 3n (triploid) 4n (tetraploid)

Genome-wide per-gene ploidy ribbon across strains
each vertical mark is one gene, coloured by winning ploidy call

ploidy call 2n (diploid) 3n (triploid) 4n (tetraploid)
